& Kent

About Radiant Flooring Systems (RFS)

With over 45 years of combined experience, Radiant Flooring Systems (RFS) is a trusted specialist in high-quality underfloor heating (UFH) and flooring solutions.

Based in Crawley, West Sussex, we provide expert services across Surrey, Sussex, South London, and Kent, delivering exceptional results for both residential and commercial projects.

Complete Underfloor Heating Installation & Floor Milling Services

At RFS, we handle every stage of underfloor heating, from design to installation, ensuring a seamless and efficient process from start to finish. With expertise in floor-milling and liquid screed, we create energy-efficient, stylish spaces where warmth and functionality meet. Committed to innovation and quality, we create flooring solutions that blend warmth, functionality, and elegance.

Daniel – Director

Specialist in Underfloor Heating & Renewable Energy Solutions

Flooring Industry Expert with Over 26 Years of Experience

Why Choose Radiant Flooring Systems?

- Over 45 Years of Combined Expertise
- Residential & Commercial Specialists
- Precision, Quality & Reliability

What we do

Our services include:

Advanced Floor Milling Technology –

Using state-of-the-art milling machines, we seamlessly integrate UFH into existing solid floors, providing an efficient and cost-effective heating solution.

Full Underfloor Heating System Installation –

We handle everything from preparation to the final installation, ensuring optimal efficiency and comfort.

High-Performance Insulation –

Installed to the required thickness, improving heat retention, and reducing energy costs.

Specialist Membrane Application –

Prevents heat loss and securely contains liquid screed for a flawless finish.

Floor Milling

At Radiant Flooring Systems, we specialise in floor milling services designed to seamlessly integrate underfloor heating (UFH) into solid floors. Whether for a residential renovation or a commercial project, our expert milling process ensures precise, efficient installation without the need to raise floor levels.

Using specialist floor milling machines, we cut exact channels into existing solid floors, allowing UFH pipes to be embedded neatly within the surface. Our advanced dust extraction system keeps the process virtually dust-free, minimizing mess and disruption to your home or workspace. Once the pipes are laid, we apply a latex floor finish to create a durable, even surface, ready for your chosen flooring.

Flow Screed

Flow Screed for Underfloor Heating Systems

Optimal Heat Transfer with Expert Flow Screed Preparation

A screeded floor is only as good as the preparation work. At Radiant Flooring Systems, we ensure that every flow screed project begins with meticulous preparation to deliver the best possible results for your underfloor heating (UFH) system. Whether for a small renovation or new build, our liquid screed solutions provide cost-effective, quick installation and excellent heat transfer.

"Dan and his team did a great job milling out the floor and installing wet underfloor heating in my kitchen. They were professional, knowledgeable, and a pleasure to deal with from start to finish."

Latex Self-Levelling Compounds

Latex Self-Levelling Compounds for Smooth, Durable Floors

Latex self-levelling compounds are an excellent solution for creating a smooth, even surface on uneven or rough floors. Ideal for residential and commercial flooring projects, these compounds are designed to fill gaps and imperfections, offering a flawless foundation for a variety of floor coverings such as tile, hardwood, and vinyl.

Enhanced Flexibility & Toughness

When mixed with latex additives, self-levelling compounds gain enhanced flexibility and toughness, making them perfect for areas prone to movement or stress. This combination ensures that your floors remain stable and durable over time while providing an optimal surface for underfloor heating systems.

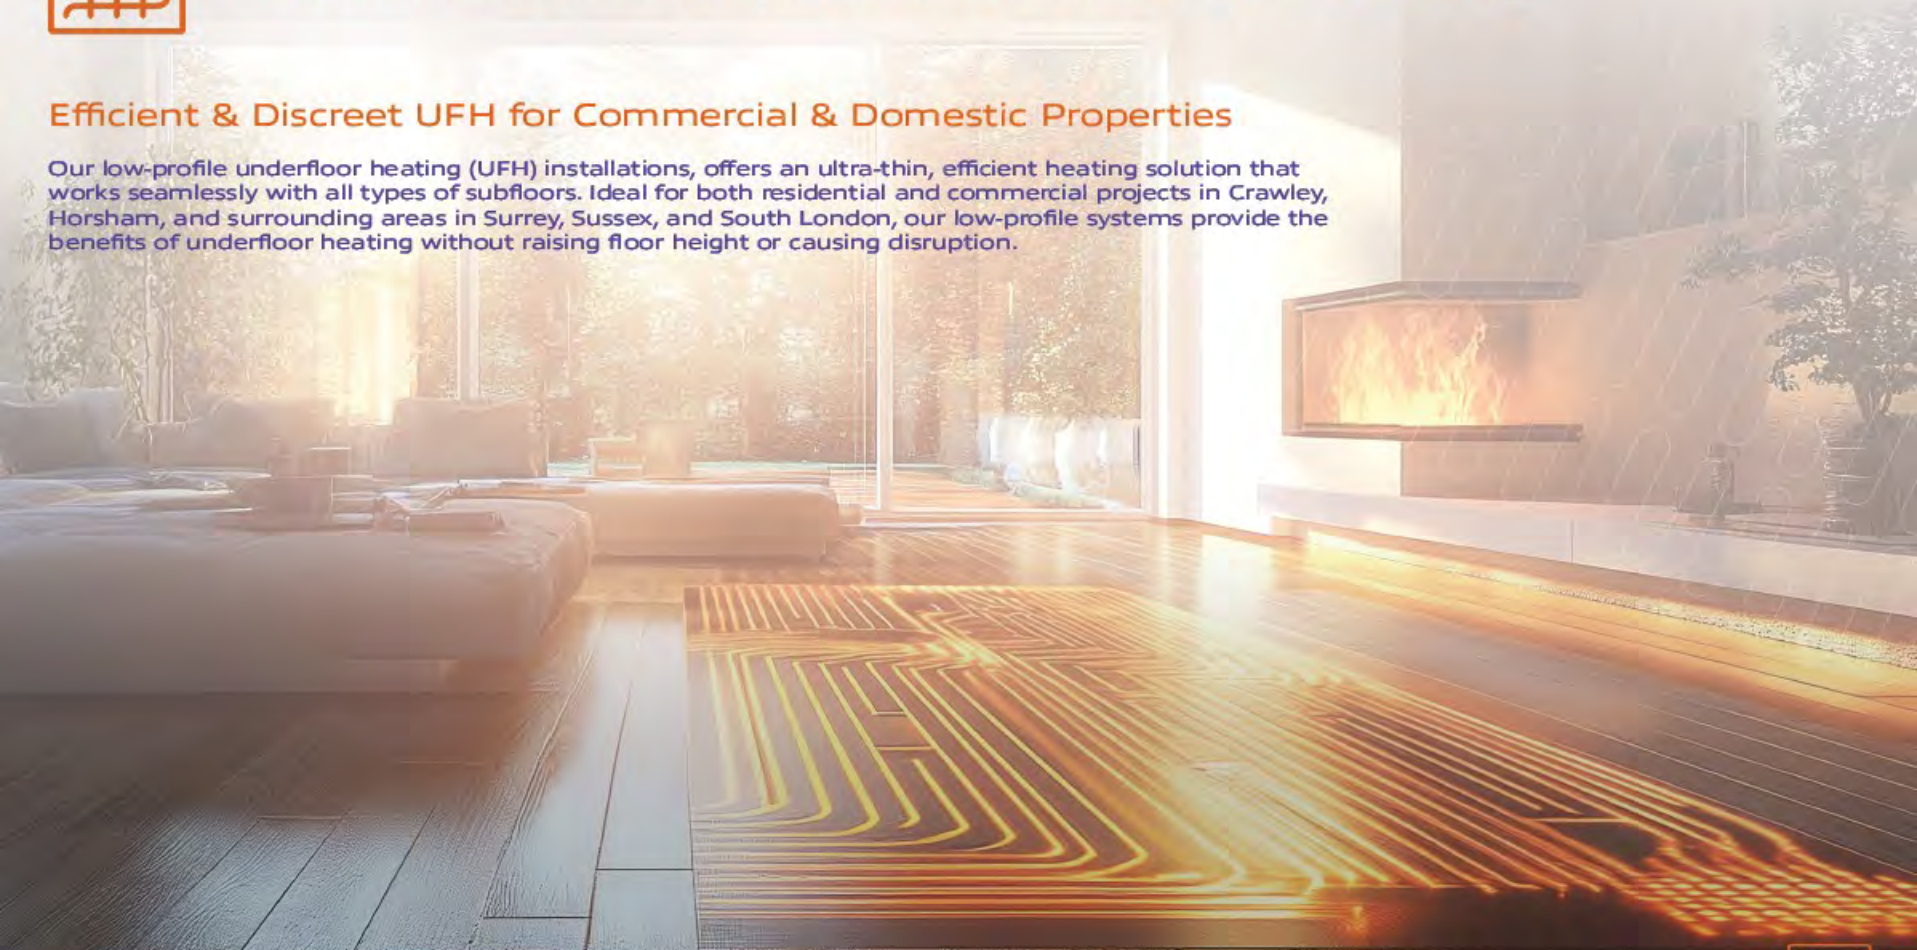

*Quality service from start to finish.
Dan and his team went over and beyond
expectations. Would highly recommend.
Kept me up to date with all the works,
punctual, reliable and trust worthy.
10/10!*

Traditional & low profile underfloor heating

Efficient & Discreet UFH for Commercial & Domestic Properties

Our low-profile underfloor heating (UFH) installations, offers an ultra-thin, efficient heating solution that works seamlessly with all types of subfloors. Ideal for both residential and commercial projects in Crawley, Horsham, and surrounding areas in Surrey, Sussex, and South London, our low-profile systems provide the benefits of underfloor heating without raising floor height or causing disruption.
